Documentation: README.md, java-project-temple-erp.md | **Live Project Link:** Add deployed URL after hosting

Project	Temple ERP System (java-project-temple-erp)
Developed By	Shirsat Suyog Madhav; Shinde Kiran Uttam
Implementation	Full-stack Java: Spring Boot 3, Thymeleaf, MongoDB, openhtmltopdf, Spring Mail
Repository	https://github.com/suyog-shirsat2004/Temple-ERP-Java
Updated On	2026-11-10

1. Introduction

Temples manage devotee services such as darshan passes, room bookings, donations, food/Annakshetra services, payments, and feedback. Temple ERP provides a centralized web-based platform to automate and manage these activities efficiently for devotees and administrators.

2. Objectives

• Manage temple activities and devotee services from a single platform.

• Reduce manual work and improve accuracy, speed, and record keeping.

• Maintain secure, organized records in MongoDB.

• Provide a user-friendly interface for devotees and administrators.

• Enable online darshan passes, room bookings, donations, restaurant/Annakshetra orders, and feedback.

• Generate styled PDF passes/receipts/tokens and deliver via email when configured.

3. Technology Stack

Layer	Technology
Language	Java 17+
Framework	Spring Boot 3.x, Spring Web MVC, Spring Security
View/UI	Thymeleaf, HTML, CSS, JavaScript, Bootstrap/icons
Database	MongoDB (Spring Data MongoDB)
PDF	openhtmltopdf + Thymeleaf HTML render templates
Email	Spring Mail / Jakarta Mail (SMTP, Gmail App Password)
Build	Maven (mvnw/mvnw.cmd wrapper)

4. Modules & Features

Devotee/User: Registration/login, forgot/reset password, profile management (avatar/photo update, single-field updates), darshan pass booking, room booking, donations/payments, restaurant/Annakshetra ordering, feedback/contact, notifications (select/bulk/single delete), and PDF/token/receipt view/download.

Admin: Dashboard, users, darshan passes/types, rooms/bookings, donations, restaurant menu/orders, feedback/contact, login activity, notifications, email settings; approve/reject/status actions and PDF/token handling.

5. Key Implementation Updates

• **Async performance:** Background PDF generation and email sending for faster submissions/admin actions.

• **PDF styling:** Donation/restaurant/booking PDFs match Darshan Pass format with temple logo and compression (target < ~5 MB).

• **Email:** SMTP/Gmail App Password support; DB MailSetting preferred over properties.

• **Notifications:** Owner-scoped select, bulk, and single delete.

• **Profile:** Avatar-click photo/logo update, partial/single-field updates, clearer validation/errors.

• **Accounts:** Multiple accounts may share the same email (startup drops unique users.email index; auto-index creation disabled). Username remains unique.

• **Admin download:** Restaurant admin download serves original generated PDF (same as emailed).

6. Configuration, Run & Deployment

Prerequisites: Java 17+, Maven/wrapper, MongoDB. Default/local port: 5000 (`server.port=${PORT:5000}`). Configure `MONGO_URI` and mail env vars for production. Run: `.\mvnw.cmd spring-boot:run`. Build: `.\mvnw.cmd -DskipTests clean package` then `java -jar target/*.jar`.

Live deployment: host JAR on a Java platform (Render/Railway/Koyeb/Fly.io/Azure etc.) with MongoDB Atlas and set environment variables. Add the generated live URL to README.md/java-project-temple-erp.md and GitHub repository details.

7. Links
